

PORT-A-COOL

Port-A-Cool, a portable evaporative cooling unit that utilizes a unique, patented design, that simply works by pulling hot ambient air through water saturated evaporative cooling media. The evaporation process takes place within the cooling media, creating cool air that is dispersed by a fan located in the front of the unit.

Port-A-Cool units lower the temperature of the air by up to 10 degrees Celsius or 18 degrees Fahrenheit and disperse that air over a large square foot area.

Using only tap water and 115volt power source, these units operate for literally pennies a day.

Port-A-Cool units are completely portable, easy to operate, easy to clean, easy to maintain and available in four sizes to fit any cooling need.

Port-A-Cool units are used for cooling air, humidity, ventilation, disinfecting, dust and odor control in a variety of applications including: Animal confinement (swine, poultry, dairy, turkey, equine), greenhouse and garden centers (retail, shipping and packaging areas), industrial/commercial buildings, produce storage, riding arenas and outdoor cooling (tents, patios etc.). A perfect choice for areas that would be impractical, ineffective or cost prohibitive to cool with a conventional air conditioner.
